Convuluted | Cabin
Seat | Car

Content

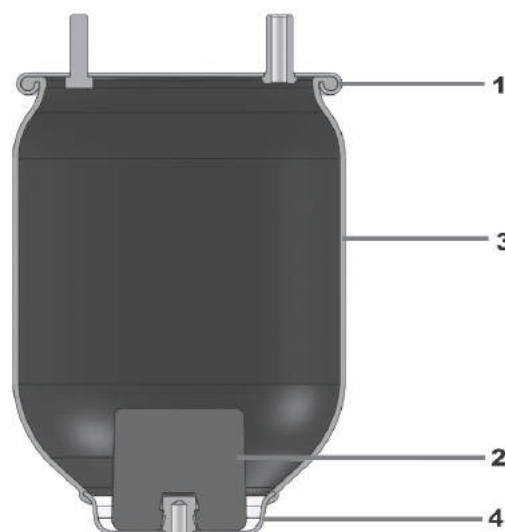

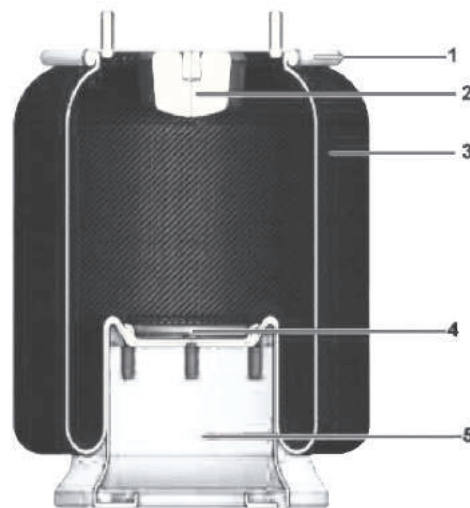

Roll Air Springs.....	10-38
Service Assembly	39-108
Complete With Metal Parts.....	109-209
American Type.....	210-267
Convolute Air Springs	268-318
Cabin Air Springs	319-355
Seat Air Springs.....	356-363
Car Air Springs.....	364-368

Product Description

1. The crimped plate serves to fasten the air-spring bellow to the vehicle's frame.
2. The bumper restrict the air spring stroke and ensures the emergency operation properties.
3. The actual springing element, i.e., an air-spring bellow, consists of: internal reinforcement material, stabilizing brackets and external covering.
4. The clamping plate produces a connecting link between the air-spring and piston; which can either be vulcanized on, or constructed as a true clamping element, according to the item.
5. The piston produces a connection between the air-spring and axle.

WARNING!

The air spring may only be pressurized in fitted state. Operation only in the vehicle's air suspension System or in suitable device. Do not apply more than 7 bar in pressure. Risk of Injury!

Vector Air Springs Installation Instruction

- The best way to change an air spring is to use a complete system and to exchange axle wise.
- Here we Show as an example how to Exchange an Air Spring System on a truck rear axle.
- Please alwas refer to the mounting instructions of your vehicle manufacturer.

- Always secure your vehicle first and make sure it remains stable during the entire process
- Deflate your Air Spring and keep the air pressure system and the ignition completely switched off.
- Attention: The distance between chassis and ground will be reduced.

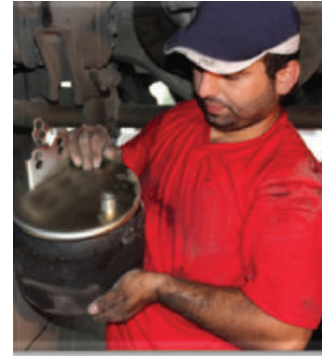

- First loosen all screw connecting teh Air Spring System to the chassis
- Then loosen all screw connecting the Air Spring System to the axle
- Remove the defect air spring system.
- Clean the faying surface and look for corrosion
- Keep the air pipe closed against dir tor dust at all times

Vector Air Springs Installation Instruction

- Check for abrasion, embrittlement and cracks in the rubber parts
- Check metal parts for corrosion
- Check plastic parts for capillary cracks.
- Check for possible contamination by lubricants such as oil, diesel, brake or cooling fluids.
- Remove all foreign objects such as stones or dirt
- Remove all liquids and check source of contamination

- Install new Air Spring System between chassis and axle and insert
- Screws (new ones if the old ones are corroded or the threads are worn down).
- Tighten the top plate to the chassis first
- Attention: make sure you use the correct torque which is recommended by your vehicle manufacturer or in this catalogue
- Leave the air inlet open

- Pull down the piston until it touches the mounting plate (if necessary use a compressed air gun with max 0,3 bar)
- Compulsively comply with the height limit
- Now tighten the piston to the axle with a torque key making sure to use the correct torque recommended by your vehicle manufacturer or in this catalogue

- Connect pneumatic valve with the air inlet of the new air spring also with the recommended torque.
- Inflate your Air spring with the recommended working pressure, release the safety catch of your vehicle and put it back into driving position.
- Drive on the safer side with quality

Problem Cause And Solutions

Problem and Cause

Deformed Air Springs

- improper storage
- improper transport
- improper handling

Solution

- storage according to ISO 5285 no daylight, dry.
- at normal room temperature
- avoid improper transport
- avoid improper handling.

Problem and Cause

Damage of the conical beads and cuts

- improperly mounted bead plate
- pinching of the bellows with metal part

Solution

- keep conical beads clean and corrosion free
- avoid driving without pressure
- in the air suspension

Problem and Cause

Bellows rubs off at shoulder

- bead plate diameter incorrect
- bellows too long for application

Solution

- make sure to use original parts
- avoid wrong cross references

Problem and Cause

Broken off thread bolts

- excessive torque
- use of oils or lubricants

Solution

- don't exceed recommended torque according to your maintenance manual
- avoid usage of oils or lubricants

Problem Cause And Solutions

Problem and Cause

Overextension

- spring travel not restricted
- incorrectly adjusted level control
- air spring not suitable for application

Solution

- check the shock absorbers
- check and adjust level control valve
- double check if the air spring fits the OE part number

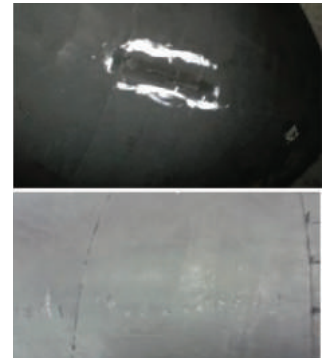

Problem and Cause

Abrasion

- Bellows contact with chassis parts
- Bellows contact with foreign bodies

Solution

- double check if the air spring fits the OE part number
- check regularly and remove foreign objects
- sticks between bellows and piston

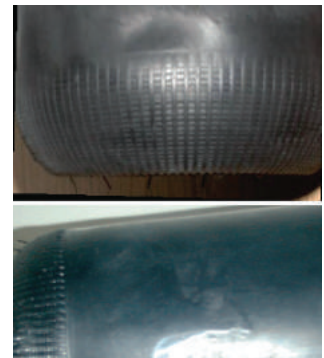

Problem and Cause

Abrasion

- Bellows contact with chassis parts
- Bellows contact with foreign bodies

Solution

- double check if the air spring fits the OE part number
- check regularly and remove foreign objects
- stuck between bellows and piston

Problem and Cause

Air Spring bursting, broken piston

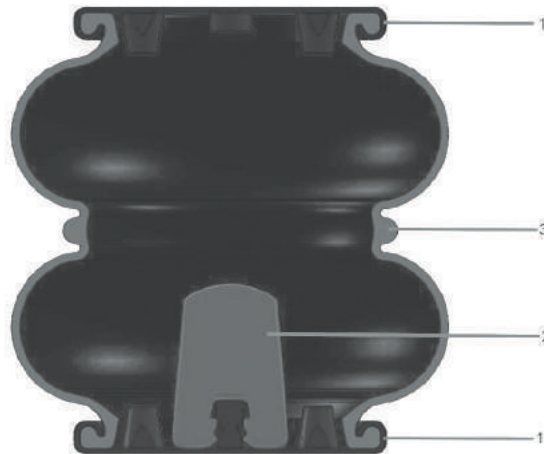

- overload
- exceeding the maximum allowable pressure

Solution

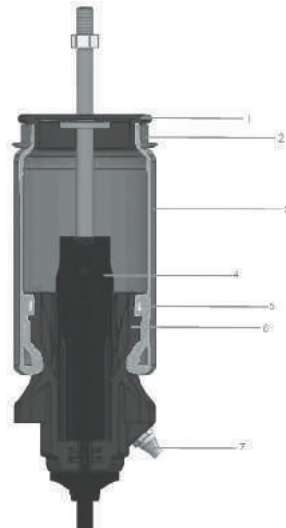

- never exceed the maximal allowed weight of the vehicle

Product Description

- 1.crimping plate
- 2.bumper
- 3.sleeve

- 1.clamp plate
- 2.crimping ring
- 3.Sleeve
- 4. Shock absorber
- 5.crimping ring
- 6.piston
- 7.air jack/air inlet

Problem Cause And Solutions

Problem and Cause

Abrasion

- Bellows contact with chassis parts
- Bellows contact with foreign bodies

Solution

- Double check if the air spring fits the OE part Number
- Check regularly and remove foreign objects stuck between bellows and piston

Problem and Cause

Broken shock absorber

- spring travel not restricted
- Incorrectly adjusted level control
- air spring not suitable for application

Solution

- Check the shock absorbers
- Check and adjust level control valve
- Double check if the air spring fits the OE part number

Problem and Cause

Abrasion

- Bellows contact with chassis parts
- Bellows contact with foreign bodies

Solution

- Double check if the air spring fits the OEM part Number
- Check regularly and remove foreign objects stuck between bellows and piston

Problem and Cause

Air Spring bursting

- Overload
- Exceeding the maximum allowable pressure

Solution

- never exceed the maximal allowed weight of the vehicle

Technical drawing of a wheel assembly, showing three views: a side view, a top view, and a front view.

- Side View (Left):** Shows the profile of the wheel. Dimensions include a total width of 45, a mounting flange width of 15, a mounting hole diameter of 10, and a mounting flange thickness of 20. The wheel body has a height of 105.5 and a central hub diameter of 75.
- Top View (Top Right):** Shows the wheel from above. Dimensions include a total diameter of $\varnothing 227$, a mounting flange width of 6.5, a mounting hole diameter of 10, a mounting flange thickness of 7.8, and a mounting flange diameter of 130. The mounting flange is secured with an M16x1.5 screw.
- Front View (Bottom Right):** Shows the wheel from the front. Dimensions include a total diameter of $\varnothing 195$ and a central hub diameter of M14.

Technical drawing of a wheel assembly, showing three views: a side view, a front view, and a rear view. The side view (top left) shows a wheel with a central hub and a rim. Dimensions include a hub width of 45, a rim width of 15, a hub height of 45, a rim height of 151, and a total height of 105.5. The front view (top right) shows a circular wheel with a diameter of $\varnothing 227$, a hub diameter of 74, a rim diameter of 60, a hub width of 50, and a total width of 159.5. The rear view (bottom right) shows a circular wheel with a diameter of $\varnothing 195$ and a central hole of $M14$. The drawing also includes a detail of the hub and rim connection, showing a bolt with a diameter of $M16 \times 1.5$.

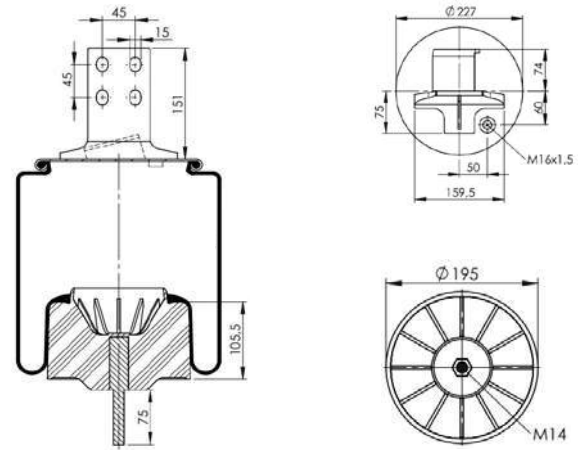

The technical drawing illustrates the dimensions of the M16x1.5-200mm ball joint cap nut across three views:

- Front Elevation View:** Shows the overall height of 151 mm. The top flange has a width of 45 mm and a thickness of 15 mm. The central body has a diameter of 75 mm.
- Top View:** Shows the circular profile with an outer diameter of $\varnothing 227$. It includes a central hole with a diameter of 75 mm and a smaller hole with a diameter of 50 mm. The distance from the center to the edge of the 50 mm hole is 159.50 mm. A thread specification of M16x1.5 is indicated.
- Bottom View:** Shows the base of the nut with an outer diameter of $\varnothing 190$. It features a central hole with a diameter of 75 mm and a smaller hole with a diameter of 50 mm. A thread specification of M14 is indicated.
